The Unknown Building

We were not told where this building will be built, but it is quite unique and has the following characteristics:

> The tower will be 250 meters and 59 floors. The structure will be mounted in a concrete core that will serve as a rotating shaft. The floors will be pre-assembled and attached to the core one by one. Each floor will rotate separately. The movement will be slow, and will not be noticed by the occupants.

Professor made the following comments:

- From the mundane perspective:

  > This kind of residential or commercial building design may be considered brilliant.

© Katherine Metz

- However, from the transcendental point of view:

  Even if the building meets all safety and engineering requirements, there is still danger. The weight may shift unevenly. If the fulcrum is unsteady, the building may shift too much to one side or the other. Other safety concerns may not yet be evident.

  If each tier is suspended in air, it will feel as if the foundation is not deep or stable. However, the "independence" (provided by the unique separation of the floors) may mean that those working or living on each floor may be able to venture out into the world with new pursuits.

  However:

  - Occupants, whether living or working there, will live in fear.
  - Occupants may develop panic disorders or phobias.
  - Occupants may suffer with illnesses that are both baffling and incurable.
  - Businesses may suffer with sudden and unexpected absenteeism due to illness. Turnover may be erratic, and employees may be suddenly replaced or fired.
  - No matter how much effort is made, a business will have great difficulty increasing its bottom line. Sales and profits will become impossible.

Professor gave the following cure:

- Place the calligraphy *Heavenly Beings Bestowing Blessings* on each floor.

  You can purchase the calligraphy from the Yun Lin Temple in Berkeley, CA. (www.yunlintemple.org)

If you have any information about this building, please let us know.
